

When gluing seams together, gap between seams should not exceed a 1/4" gap. STANDARD MANUFACTURED BEAD SPACING ARE EITHER 1/4" TO 1/2". When preparing the seam try to cut one of the grass panel being seamed as close to bead as possible (see panel A) without touching or cutting the bead. On other piece of grass panel being seamed, cut leaving majority of backing (see panel B) opposite of other grass panel being seamed.

Glue being added to seaming tape. Note temporary spikes being used to hold grass in place while lining up seams.
